Market Overview 2022

In 2022, the Australian property market underwent a shift in market conditions. While last year's Best of the Best celebrated some of the strongest annual sales turnover and value growth on record, this year's report examines some of the most resilient markets as we move through one of Australia's fastest interest rate tightening cycles in history.

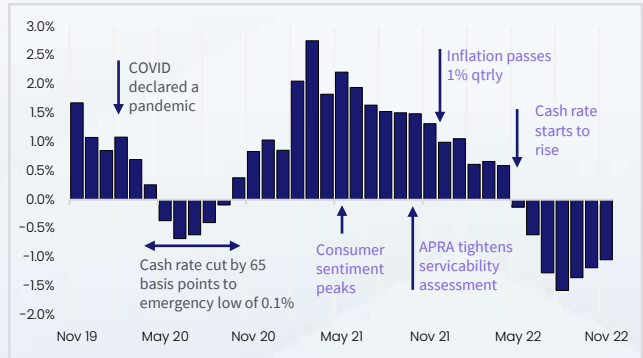

Over the year to November, national housing values fell -3.2%, driven by an annual decline in capital city dwelling values of -5.2%, while regional dwelling values rose by 3.3% over the same period. The estimated total value of residential real estate decreased from \$9.6 trillion in December 2021 to \$9.4 trillion in November 2022. Estimated annual sales declined -13.3% compared to the year to November 2021, with approximately 535,000 homes sold nationally.

The driving force for weaker value growth in 2022 was rising interest rates. Historically, CoreLogic has seen a consistent inverse relationship between interest rates and property values. Not only do higher interest rates limit the amount of borrowing that can be used to purchase housing, but some buyers will be dissuaded from borrowing altogether, leading to less competition in the housing market.

Several other factors contributed to weaker housing market performance over the year, including worsening housing affordability from the perspective of mortgage serviceability and rents, and lower consumer sentiment. Persistently high inflation put additional pressure on household balance sheets, making it harder for first-time home buyers to save a deposit. A reduction in buyer demand saw seller negotiating power dwindle, leading to larger vendor discounting rates and increased days on market.

Off the back of solid capital gains in 2021, CoreLogic's home value index rose by 3.0% between December 2021 and April 2022. Although positive, this was a significant deceleration from the growth rates recorded at the cyclical peak. The downward trajectory intensified on the 4th of May when the RBA announced a 25-basis point rise in the cash rate (the first rate increase in more than 11 years), pushing national dwelling values down and ending the 19-month trough to peak growth cycle (28.6%).

Figure 1 – Monthly change in national dwelling values

Unexpectedly high inflation data for the March quarter saw the RBA revise its inflation outlook. The factors behind high inflation have been varied through the pandemic period, taking the cash rate 300 basis points above the emergency lows introduced during the pandemic, to 3.10%.

Since the first interest rate rise, national dwelling values have fallen by -7.0%, overtaking the 2008-09 downturn as the steepest national decline on record. This is the equivalent of a fall in the median dwelling value of approximately \$53,500, to \$714,475. While this has helped shift negotiating power back to the buyer and may have helped some first-home buyers get over the deposit hurdle, the significant rise in interest rates has seen the conversation around affordability shift from accessibility towards serviceability.

Figure 2 – Comparison of previous peak to trough decline in national dwelling values

Market Overview 2022

Under a 20% deposit and a 30-year loan period, the monthly mortgage repayment on the average new owner-occupier loan was \$2,399 in April¹. Assuming the November and December rate hikes are passed on in full, the average variable rate would rise to 5.08%, adding around \$698 per month to the average mortgage repayments, despite the loan principle falling by more than \$42,000.

The impact of rising interest rates has not been uniform. More expensive housing options, including detached houses and capital city markets, have generally recorded larger declines in value compared to high-density and regional markets.

Combined regional home values are still 3.3% higher than this time last year, while combined capital city values fell by -5.2%. Similarly, capital city unit values recorded a milder -4.3% decline compared to a -5.5% fall in capital city house values. Across the capital cities, price changes have also been diverse. The annual change in dwelling values across the capital cities ranged from a -10.6% decline across the Greater Sydney market, to a 13.4% gain in values across Adelaide.

Despite recording higher value growth through the upswing, regional markets still offer relatively affordable price points, with the combined median regional dwelling value sitting around \$200,000 lower than the median combined capital city dwelling value.

Higher end housing markets may have seen more sensitivity to recent rate rises, because they require higher debt levels to access. The chart below shows the top 25% of housing values across Australia have historically experienced higher upswings and steeper declines, with milder fluctuations across the middle and bottom quartile of the market.

Figure 3 – Quarterly change in National dwelling values – by quartile

Notably, the quarterly growth chart of tiered hedonic indices (above) also shows a faster shrinking in the rate of decline across the top 25% of home values in the past few months. The top 25% of Australian home values declined -6.0% in the three months to September, followed by a softer rate of decline of -4.5% in the three months to November. This deceleration in the rate of decline is also becoming evident across the middle and low end of the market.

One factor that may be helping to insulate the downturn so far is the relatively low level of new advertised property coming to market. Previous research by CoreLogic suggests that newly advertised listings typically rise by 21% between winter and spring; however, new listing levels fell by -2.5% between winter and spring this year. While frustrating for prospective buyers, the lack of a typical spring listing surge is positive in that there has not been a material sign of a rise in distressed listings. This suggests that, where possible, vendors are choosing to 'sit out' the downturn and wait for more favourable selling conditions.

¹ The average monthly mortgage repayment for April is calculated using 80% of the index-adjusted median value and the average variable rate in April (2.41%).

Market Overview 2022

Across the capitals, suburbs in Sydney's City and Inner South, Northern beaches and Eastern suburbs regions dominated the 2022's list for strongest house and unit declines. House values across Narrabeen, Surry Hills, and Redfern fell by more than -25% over the year, while unit values in Centennial Park and Mona Vale fell by -23.1% and -20.8% respectively. At the other end of the scale, Adelaide dominated the list for strongest annual appreciation in value across both property types, with house values across Davoren Park rising by 34.7%, and unit values in Seacliff Park 41.4% above the levels recorded this time last year.

Adelaide's resilience has been a consistent feature of the housing market this year. While down -0.9% from the July peak, dwelling values across Adelaide are still 13.4% above the level recorded this time last year. Adelaide's relative affordability and persistently low advertised stock levels have helped insulate Adelaide from the worst impacts of rising interest rates.

Despite being more resilient to current market conditions, regional values have not been immune. Although a number of regional suburbs recorded exceptional annual growth, including house values in NSW's Bingara (36.2%) and unit values in QLD's Laguna Quays (30.9%), the majority of regional SA4 markets have moved past their cyclical peak, and are now recording declining values. Suburbs across the NSW's Richmond – Tweed region (impacted by both rising interest rates and recent flooding) dominated the list for largest annual house declines, while decreasing unit values across QLD's Townsville were also heavily featured. Popular lifestyle markets like the Southern Highlands and Shoalhaven, the Sunshine Coast, Gold Coast and Illawarra have recorded some of the strongest peak-to-trough declines in value. However, it is unlikely these markets will fall below the levels recorded at the beginning of COVID, given that dwellings across these regions are still, on average, 38% higher than where they were at the onset of COVID-19.

Strong rental results were also a feature of this year's Best of the Best report. CoreLogic's national rental value index rose 10.2% over the year to November, the highest annual rental growth on record. Partially driven by a reduction in the average household size, the continued upswing in rental values throughout 2022 was predominantly driven by the strong return of overseas migration, coupled with extremely tight rental supply. The national vacancy rate fell to 1.0% in November, overtaking the month prior as the lowest on record. With such limited rental stock, there is some anecdotal evidence that prospective renters may be looking to re-form larger households as a way of sharing the additional rental burden, while others may be looking towards the unit rental market as a more affordable option.

Over the year to November, medium to high-density rents rose by 13.0%, while house rents increased 9.1% over the same period. The return of overseas migration, typically associated with unit rental demand in inner-city Sydney and Melbourne, has started to recover, pushing unit rents across these precincts up. Sydney and Melbourne featured heavily in the Best of the Best strongest rental growth lists. Unit rents across Melbourne City rose 38.2%, equivalent to a \$158 per week rent rise, while unit rents in Sydney's Haymarket rose by 29.8% or \$216 per week.

Overall, 2022's Best of the Best report highlights the resilience of the more affordable property markets, as well as some significant value declines across the country's most expensive suburbs. The second half of the year was broadly defined by a housing market downturn, which has become increasingly geographically board-based as the cycle progresses. While at a national level, the pace of monthly value declines has eased since August, values are expected to continue to fall in line with further increases to interest rates.

Market Outlook 2023

Housing market trends in 2023 will largely be shaped by monetary policy and the housing lending environment. The expectation of a peak in inflation and interest rates next year could mark a bottoming out in price falls. On the other hand, the expiry of fixed rate terms, and the surpassing of serviceability assessment buffers, pose a test to mortgage serviceability. Aside from monetary policy, migration and rental trends could also see a lift in investor and first home buyer activity as housing values find a floor.

Further rate rises, further price falls in 2023

The final paragraph of the December monetary policy statement from the RBA outlined “expected” further increases in the cash rate over the period ahead. Additionally, the RBA excluded other recent references to a potential pause in rate hikes. CBA upwardly revised their terminal cash rate forecast from 3.1% to 3.35% off the back of the December rate decision, while the median of terminal rate forecasts sat at 3.73%. These recent developments suggest further rate rises through the start of 2023, which is expected to put further downward pressure on property prices until the cash rate peak, expected in early-to-mid 2023.

A slowdown in the pace of decline?

One of the distinctive features of capital growth in 2022 was a slowdown in the pace of decline toward the end of the year. After recording a steep monthly decline of -1.6% in August, the rate of monthly decreases in national home values eased, with values falling by just -1.0% in November. Across Sydney, the quarterly decline trend has eased from -6.1% over the September quarter to -4.4% in the three months to November. Over the same period, quarterly falls across Canberra reduced from -4.4% to -3.8%, while Melbourne's three months rolling decline eased from -3.8% to -2.7% between August and November. Early signs of a possible peak in value declines are also emerging in Brisbane, Adelaide, and across the combined regional market, with the monthly pace of declines holding steady at -2.0%, -0.3% and -1.1%, respectively.

While declines have been slowing, it's still early days, and the outlook for the Australian property market still has some downside risk. For example, further increases in interest rates or an unwinding in the labour market outlook could see this trend re-accelerate. Recent movements in CoreLogic's daily home value index show a slight increase in the monthly rate of decline across Sydney and Melbourne. The weekly average weighted clearance rate has also shifted slightly lower over the past few

weeks, averaging 58.0% in the four weeks to December 4th, down from 59.5% in the previous four week period.

Rolling 28 day change in daily home value index, major capitals

Another downside risk for the pace of decline could be the end of fixed rate terms in 2023. When average fixed-interest rates reported by the RBA bottomed out at 1.95% in May 2021, the portion of fixed-interest mortgages grew from around 15% in the six months preceding COVID to more than 40% between April and November 2021. According to loan analysis by the RBA in the August Financial Stability Review, around 66% of fixed-term housing lending terms are set to expire by the end of 2023. A non-inconsequential number of homeowners could see a high 'sticker shock' as they move from fixed rates in the low two or sub-two per cent range, to a variable rate environment where average lending rates are between five and six per cent. If this leads to more motivated selling, additional supply could place further downward pressure on prices.

Furthermore, increases to the cash rate will soon surpass recent serviceability assessment buffers. APRA increased the serviceability assessment buffer to 3.0% in October 2021. These buffers were intended to ensure a borrower would meet their debt obligation amid rising interest rates, while also minimising potentially risky lending. With the cash rate now at its highest level since November 2012, recent borrows may be entering an untested environment regarding their loan serviceability, a situation made harder due to persistently high non-discretionary inflation.

However, it is worth noting some of the strengths that underpin ongoing serviceability. Australia's unemployment rate has fallen to generational lows, to 3.4% in October. While the unemployment rate is expected to rise in 2023, labour market forecasts for the RBA, the treasury and the private sector expect the unemployment rate to peak around the mid 4's in 2024, well below the previous 10-year average (5.5%). With unemployment expected to remain low through the remainder of the current tightening cycle, this should keep a lid on the rate of mortgage arrears.

The return of investors, first home buyers

2022 saw signs of diminishing investor interest in the Australian housing market, which may return in 2023. CoreLogic analysis of new listings added to market suggests an increase in the number of investors looking to sell their property in the spring of 2021, potentially off the back of strong capital gains at this point in the cycle. As rates have risen, ABS finance data shows lending for the purchase of investment property fell -20.2% between April and October, a steeper decline than in owner-occupier lending over the same period.

The impacts of this lower investor participation can be seen throughout the current rental market, with rental appreciation hitting record highs and vacancy rates hitting record lows. With rents rising at a time when property prices are falling, gross rental yields recorded a remarkable recovery over the year. Nationally, gross rent yields rose 50 basis points from 3.21% in February to 3.71% in November. This presents investors with a potential opportunity. With yields expected to continue to recover throughout 2023 and values expected to find a trough, prospective investors could be positioned to take advantage of both high rental income and capital gains.

First home buyer decisions may also be triggered by ongoing pressure in the rental market in 2023, and the potential for housing prices to reach a trough over the year. According to the Westpac-Melbourne Institute consumer sentiment report, the 'time to buy a dwelling' component of the index rose by 2.4% over the month. While still early days, this could indicate that the initial fear of buying in a downturn is starting to stabilise, with some buyers hoping to take advantage of their position at the negotiating table.

As we move into 2023, there continue to be a mix of headwinds and tailwinds for housing market performance. With expectations that the bulk of the rate tightening cycle occurred in 2022, housing value declines could find a floor in the new year. However, the extent of the floor in prices could be further weighed down by mortgage serviceability risks. Strong rental markets and improving affordability from the point of falling prices may see a recovery in buyer activity in the second half of 2023, when the cash rate cycle stabilizes.

Disclaimers

The Best of the Best 2022 highlights the top performing suburbs for houses and units

- ▶ across Australia based on the following:
- ▶ Highest Sale
- ▶ Highest Total Value of Sales
- ▶ Highest Median Value
- ▶ Lowest Median Value
- ▶ Greatest 12m Change in Values
- ▶ Greatest 12m Change in Rents
- ▶ Highest Rental Yields

All data highlighted is current as at the 30 November 2022, with the exception of Total Value of Sales data which reflect sales that occurred over the 12 months to 30 September 2022.

Top sales are based on properties that have transacted over the 2022 year to date - please note there may be sales we are not yet aware of due to the lag in reporting times, long settlements and non-disclosures.

Exclusions

Regions with less than 20 Sales;
100 AVM observations;
20 Rental observations.

Data Dictionary

Median Sales AVM value - A measure of the median (50th percentile) estimated sales value of all properties based on the hedonic imputation method, irrespective of whether it transacted or not.

AVM observations - The total number of Automated Valuations that have been run.

12 month sales volumes - A count of all transactions over the 12 months to September.

Total Value of Sales: the total value of all property transactions recorded over the 12 months to September 2022.

12 month change in value - the percentage difference between the hedonic home value index as at 30 November 2022 compared to 12 months ago.

12 month change in rents - the percentage difference between the hedonic rental value index as at 30 November 2022 compared to 12 months ago.

Gross Rental Yields - A measure of the implied yield of properties based on the underlying sales values and 'for rent' listings values of properties using the hedonic imputation methodology.

Hedonic Home Value Index - CoreLogic's headline measure for property market performance. It measures the organic change in underlying sale values of properties using the hedonic imputation methodology. The full detailed methodology description available at: <https://www.corelogic.com.au/research/rp-data-corelogic-home-valueindex-methodology>.

Hedonic Rental Value Index - A measure of the organic change in underlying 'for rent' listing values of properties using the hedonic imputation methodology. The full detailed methodology description available at: <https://www.corelogic.com.au/research/rp-data-corelogic-homevalue-index-methodology>.
